

Configure Windows to open spreadsheets in Excel instead of in a web browser

When nVision runs over the web, the excel spreadsheet generated appears in your browser window (Internet Explorer/Firefox etc.) by default. To have it open in Excel instead, **logon to windows as a user with local administrator privileges** and follow these steps:

1. Open **My Computer**.
2. On the **Tools** menu (or the View menu), click **Folder Options** (or click **Options**).
3. Click the **File Types** tab.
4. In the Registered file types list, click **XLS – Microsoft Excel Worksheet** and then click **Advanced** (or click **Edit**).
5. In the **Edit File Type** dialog box, clear the **Browse in same window** check box (or clear the **Open Web documents in place** check box).
6. Click **OK**.
7. Close all browser windows before retrying.
