RESEARCH PARTICIPANTS NEEDED

CHILDREN with AUTISM

We are studying speech and language characteristics of children with Autism. If you have a child with Autism, they might qualify for this study if they:

- are between 4 to 8 years of age and diagnosed with Autism
- have no cranio-facial or other structural differences (e.g., cleft palate)
- vocalize (communicate with at least 10 words orally and at least 50 words using some other form of communication, such as PECS, ASL, AT/AAC, etc…)
- have no known uncorrected hearing or visual deficits
- have no history within the past 6 months of self-injury or injury to others or damage to property

The study requires 1 session (approximately 1 hour). All testing will take place on the University of Massachusetts-Amherst campus. We will give rewards (parent/guardian approved items) such as stickers to make the experience fun and rewarding for your child. Test findings will be forwarded to the parent/guardian at their request.

Participants will be given a $25 Target Gift Card upon completion of all testing.
