MEMORANDUM

Date: April 30, 2008

To: All Departments

From: John O. Martin, Director of Procurement

Subj. Lektriever Vertical Carousel Automated Filing System

The Financial Aid Office has a surplus Lektriever Vertical Carousel Automated Filing System that they no longer need so it is available as surplus equipment to any department that can use it. The system is set up for standard file folders.

The unit is currently in use and it can be seen in operation. The department needs to have it moved soon to make way for other furniture. The only cost to the receiving department is for the removal and reinstallation. This would be accomplished by Donnegan Systems and is estimated in the \$2000-2500 range. This unit cost \$15,000 new so if your department is considering this type of system this is a great opportunity.

Some general information is listed below. Please contact me with any questions or if you have interest in the unit. The desk pictured is not part of the system.

thanks

The Kardex Lektriever 2000

- **Lektriever Vertical Carousel**

Kardex® pioneered vertical technology in Marietta, Ohio, and now boasts thousands of installations worldwide.

Electronic Controls are easily accessible from the front and are equipped with EMI filters for protection against static.

Included at no additional charge, the built-in fluorescent lighting system is activated automatically when the "On" key is pressed.

A redundant safety system of upper and lower infrared beams and upper and lower mechanical safety bars prevents damage to stored items. Safety beams are tested and verified each time the machine is turned on.

A key lock is standard on both powered and pull down doors.

The system moves directly to the selected carrier when started, with no cycling or installation time required.

Lektrievers exclusive operator console is the only standard-priced control system in the industry offering a two line informational display. When interfaced with a PC, the display identifies the next file or item to be removed or replaced.

When any of the safety systems are activated causing the machine to stop, the console displays a text message identifying the safety breach.

Unlike other systems in which imbalance occurs without warning Lektriever prevents the possibility of carrier imbalance by providing text and audible warnings when the unit reaches 80% of capacity. The console will automatically display the range of carriers requiring weight adjustment.
