

ACKNOWLEDGMENTS

The best and worst moments of my doctoral dissertation journey have been shared with many people. It has been a great privilege to spend several years in the Department of Resource Economics, and its members will always remain dear to me. Draper Hall was a place where I constantly felt inspired by the intelligence and humanity surrounding me. Simply put, it was a place where I wanted to do well, not because of fleeting markers of success such as course grades, but because I saw so many faculty and staff members doing their best everyday, both in their professional roles, and more importantly, in their roles as members of mankind.

Generous financial support made my doctoral studies possible. I would like to thank the Resource Economics Department for the privilege of serving as a teaching assistant to Geoffrey Allen, Barry Field, Richard Rogers, Bernie Morzuch and Cleve Willis. I would also like to thank the Department for the honor of receiving the Carolyn Harper Fellowship. In addition, I must also thank the Department, especially Cleve Willis and Tom Stevens, as well as the US Geological Survey, the University's Water Resources Center and its director, Paul Godfrey, for providing the funding for this study. During the course of my research, the department also provided me with much appreciated assistance from two undergraduate students; many thanks go to Korrin Nygren and Jennifer Lynch for all of their conscientious work on this project.

This study has benefited from the administrative help of many people. Several undergraduate and graduate students in the department kindly joined me in the tedious task of stuffing and addressing envelopes for the survey mailing- - many thanks go to Carlos Chavez, Jason Donovan, John Kinchala, Jennifer Lynch, Corinna Noelke, and

Korin Nygren for this assistance. I would also like to thank Lisa in the Water Resources Center and Nancy Filkoski in Resource Economics Department for all of their patience in assisting me with purchasing needs. Peggy Cialek not only provided me with exceptional administrative help, but also kept my spirits up with her sense of humor. Barbara Talenda was always eager to help me in any way and gracefully endured the constant hum of her office printer as my surveys printed. Darleen Slysz always had a pleasant word and a smile for me. I would like to thank Damon Guterman of the Massachusetts Department of Environmental Protection for his assistance and provision of public well data that I used to estimate the risk of chemical contamination for Western Massachusetts residents.

Perhaps the most challenging aspect of this study was its computing demands. Glenn Caffery made it possible for me to clear this hurdle - - I am indebted to him for his assistance. Eileen Keegan's computer skills were also indispensable. However, whenever I think of Eileen, what I will remember most is her spirit - - she is an extraordinary person and I admire her tremendously. I am also most grateful to Rob Belkner for his generous assistance with the bootstrapping process, among other things.

My classmates were sources of laughter, joy, and support. Special thanks go to Rob Belkner, Juan Camilo Cardenas, Carlos Chavez, Janine Dombrowski, Jason Donovan, Elena Gavrikova, Jennifer Lewis Gruber, Michelle McGregor, Sumeet Rattan, and Hannah Sarnow. I am very happy that, in many cases, my friendships with you have extended well beyond our shared time in the program.

I have benefited greatly from the generosity and support of many faculty members. In particular, I would like to thank John Stranlund for his encouragement and

teaching ability, and Geoff Allen for the lunchtime conversation and for always being complementary. Richard Rogers' amazing Introductory Statistics course first lured me in the direction of the Resource Economics department; I am very grateful to him not only for this, but also for his many kindnesses to me. Barry Field was a source of much good advice, and I would like to thank both he and his wife, Martha Field, for their support of my pursuit of a teaching career. Special thanks also go to John P. Buonaccorsi, Professor of Mathematics and Statistics, for allowing me to call on him for help with this project and for his general support of my career goals. Bernie Morzuch is simply unforgettable, and there is no way to enumerate the assistance and support he has given me. Let me simply say that Bernie has been an inspiration to me - - he is consistently two notches above excellent, both in his devotion to teaching and the ebullience with which he approaches daily life. It has been a joy to know him.

The members of my dissertation committee were truly remarkable. As the "outside" member of my committee, Paul Godfrey brought a much-needed scientific perspective to my work, editing skills, and a common sense view that improved the final product. He was always willing to answer questions, and remained a strong source of support throughout the course of my research. There are few characters like Dan Lass - my verbal sparring with him is one of my fondest memories of graduate school. More seriously, I will always remember his conscientiousness, willingness to go the extra mile to help a student, and dedication to his family. During my years in the Resource Economics Department, Cleve Willis exhibited boundless generosity and enthusiasm in all his roles - - teacher, chairperson, and dissertation committee member. He has an uncanny knack of appearing to have unlimited time not only for me, but also for other

students, faculty and staff. His comments, whether they regarded my dissertation, my career plans, or other matters, were consistently insightful. Above all else, I will remember the optimism he brings to everything he touches and the universal respect that he commands.

Special thanks go to my “family through marriage” for giving me a place where the door is always open. I would especially like to thank the three Ciocis, Jane Skurka, Ginia Krupa and Emily Mish, as well as Henry Zdabosz and Ann Harley, for always making me feel as though everything would be OK, reminding me not to worry too much, and for giving me the chance to be a part of a family where one could never feel alone. Betty Williams gave me unwavering support, and the process of writing this dissertation was made less lonely by our “chats”.

I have been very blessed in my life, particularly in my friendships. In all of the ups and downs that came my way during the “dissertation years”, I knew that I had the support of three friends, be they near or far at any particular moment. Daphne Kalotay gave me sound advice, much-needed reassurance, and much joyful laughter - - the gifts of a friendship that I believe will continue to stand the test of time and distance. Daphne, as I’ve said before, the world will always love you as much as you love it. Andrew Slap, a fellow dissertation writer and dear friend for many years, knows the best and worst of me, and continues to stick by me anyway. Andy, thank you for the countless ways in which you have supported me during this and other endeavors, and for being someone who just knew. You have my unending admiration and affection. To Carla Serpa-Downing, I owe more than words can ever fully express. Carla, you have been everything one could ask for in a friend, and then some. Although we are not related by

blood, I will always think of you as immediate family. Thank you for being with me to persevere during the bad times and celebrate the good times. My life has been made infinitely richer because of you, and I will spend the rest of my life trying to be the kind of friend to you that you have been to me.

I have had the good fortune to cross paths with many dedicated teachers. However, there are three people that made the completion of this dissertation possible by guiding me through various stages of my education. Early in life, as a sixth grader in the Fall River public school system, I crossed paths with Ronald Hadad. This man made me hungry for knowledge and understanding, and instilled in me a desire to give back to others the gifts he so generously gave me. Mr. Hadad, thank you for all your faith in me over the years. I will never pass a milestone in my life without remembering that it was you that convinced me I could take the first steps. While an undergraduate economics major at the University of Massachusetts-Amherst, I met Professor James K. Kindahl. Professor Kindahl is an inspiration in so many ways; he is a talented teacher, wise and caring advisor, and simply a very good man in all the ways that truly matter. He never doubted that I would complete this dissertation, and while I certainly had my doubts from time to time, knowing that such a wise man had so much confidence in me helped me to think that just maybe I could do it. Finally, Professor Thomas Stevens directed this dissertation with patience, attentiveness, and generosity that far exceeded any reasonable standards. I am forever indebted to Tom, not only for the countless ways he contributed to this particular project, but also for the myriad ways he supported me in all of my goals. He is one of the University's finest assets, and my respect for him continues to grow. Tom is not only the kind of professor, but also the kind of person, I aspire to be. These

three men not only taught me how to think, but also taught me how to live with humility, curiosity, and conviction. For all of these things, this dissertation is dedicated in part to them.

Finally, this dissertation is dedicated to my greatest blessing, my husband, the most decent and loving person I've ever known. In spite of your desire to pass quietly through life, unnoticed, all of us who have you in our lives know just how amazing you are in everything that you do. Simply watching you go about your daily life makes me proud to be your wife. Thank you for all your unconditional love and understanding. A lifetime with you will always be too short.
