Missing Agreement: Where is it Dialect and Where Deficit

From work by: T. Roeper, E. Ramos, L. Abdul-karim, H. Seymour
University of Massachusetts
ASHA 2000, Washington, D.C.

I. Can we define "Possible Disorder" in UG?

1. Deficit = deviance unlike a Delay

2. Missed Formal Feature Hypothesis
   = Premature fixation of lexical item

II. Missed Formal Features and Normal Lexical acquisition

A. Why does normal child not say: "Me can do it"
   => learn Nominative => change to "I can do it"

B. Normal Child: Maximize Formal Features
   1) I saw the boy => [the: +sing,+masc,+def,+acc]
      ich sah den Mann

   2) The girls arrived => delete: ,masc,sing, acc
      German: no change (den => correct (idealized))

C. Normal acquisition of Modal:
   can => modal meaning => Understood before used
   search for Tense, Agr, Case, Selection properties
   "John can sing" => no case information

   1. Constraint on Normal Acquisition:
      Do not insert item into grammar until all domains checked

D. Deficit Grammar: fix item in grammar without AGR or CASE

E. Dialect: AGREEMENT present as Universal Grammar Option
   => Check each domain separately
   => AAE requires nominative in "I can sing"
      AGR carried by Modal

"categories lacking interpretability should be disallowed" (Chomsky (1998))

   a. Conclusion: [-interpretable] => Formal Features (AGR, Case)

E. General Hypothesis: Fix lexical item without
   [-Interpretable features]

   1. In productive grammar => No Retreat
      (Clahsen, Vainikka, Eisenbeiss (1994))

III. Case-Study: Missed Formal Features

A. AGR = FF not a node
Hypothesis: missing in NP "two lobster" 
and IP at same time "Daddy like"

Munn (to appear, LI): Genitive = Agreement morpheme "them eyes"

B. JC 4.4–46yrs (Ramos and Roeper (1994))

3) That why them put a lot of sand in (Note: CP-why) Genitive (in NP-of):

4) Me Daddy like mustard
   Me sister name Dawn
   He family. He lost he family
   He shovelled him truck
   Them Mom could let them play outside

5) Nominative (in IP):
   Me like ketchup
   Me don't know
   Me said me gotta hurry up
   Her can cook something
   Them have a party

6) Discourse: "Me sister name Dawne. Her give me Dad a lobster, a two lobster,
   Me Mom put in here, cook them, forgot to take them eyes out.
   and then it give it to Mom He say put it down. And then her say ahh, and then her put on
   the floor, and we scare her. Her say, ahh it's moving, and then them cook them up, and it
   scared Mom, so we gonna put him to trouble. And then he be trouble....you can't eat eyes.
   Only you can eat skin. And me did eat it."

We find occasional nominatives here, but wide-ranging absence of agreement in both verbal
and nominal contexts.

While in normal acquisition the emergence of agreement and other Formal Features
happens so quickly, it is difficult to separate out which factors are independent, we find that
there is ample evidence for other kinds of complex syntax, while precisely agreement
phenomena remain unmastered.

Evidence for the presence of Inflectional information can be seen in these cases:
   Me can have this
   her can cook something
   it don't have a mouth
   then me no have to go bath
   it can poke somebody
   me don't have a cat on a bed
   Only you can brush your teeth very good
   No her can put up here
   I see he shadow....I can make see my shadow

In addition just the kinds of structures associated with raising over negation are found:
   Me never have them real big
   Me never take a shower

There are also extensive examples of CP-level phenomena:
When me go outside to play, me go like that
that because them Mom don't let them
that why them put a lot of sand
Why him don't have eyes
when him crack tiny pieces up, and then put (unintelligible)
why her need this
what's I talking about
I don't know where her can cook

In addition other signs of complex syntax co-exist with the absence of agreement.
For instance, the presence of reflexivization:

her standing and her see herself

Also there is evidence of wh-movement and Operator-movement:

lobster to eat for lunch
I don't know what he saying
What's I talking about

Some of these sentences show evidence of Agreement as well, although it is absent in the majority of cases. The mixture can be analyzed along the lines of multiple grammars advocated by Roeper (to appear) and Yang (1999), which has been argued for the history of English as well by Kroch and Taylor ( ). The crucial point is that there are clear absences of agreement while other features are present, arguing for their independent representation.

A broad picture of ten recordings can be found in these

7) 10 weekly recordings:
   a. 386 instances had "me" as possessive in 56% of cases,
   b. "them" 100%
   c. "he" 60%, "him" 40%.

7) Comprehension experiment: Choose
   [picture of me painting] [picture of my bucket of paint]
   "the girl saw me paint"
   "the girl saw my paint".
   5/10 instances, "me paint" interpreted as "my paint"

C. Prediction: If "can" = [-case]], Nom => [-case]
   a. Anecdotal Evidence: "I sure" or "I" = default (T. Wyatt)
      Background: Abdul-Karim (1994) "who has a hat"
      => me (2yrs)
      => "I do" (2 3/4 yrs)
      => *"I" never

   b. Symmetry: can=> does not project Case
      I => does not receive Case

Conclusion:
   1. not simply mispronunciation of "my" as "me"
2. Not a Choice of AGR or Tense (Wexler (1998) for normals)
3. Supports Chomsky's semantic view of categories
4. AGR = a FF in NP and IP
5. Deficit: fix FF of lexical items without [-interpretable] FF
   (see de Villliers and Johnson (1999))

IV. Searching for AGR: Relational PP as Deletable AGR-element

Disordered: (Seymour and Roeper (1994))
Subjects: 17 Disordered Children
1. How did the mother decide to sweep?
   "with a broom" 121 cases
   "broom" 26 cases
Normal children: rare deletion of "with"

A. Lexical level => Compounds

Incorporation => Relational Prep deletion (Roeper and Siegel (1978))
1. made at home => home-made
2. made by hand => hand-made
3. made in a factory => factory made
4. eaten by moths => moth-eaten
5. eaten with a fork => *fork-eaten

6. swept with a broom => broom swept (instrument "with")
Compare: swept with a friend => *friend-swept (accompaniment "with")

Lexical Prepositions:

1. go through tunnel => *tunnel-gone
2. found around flowers => *flower-found
3. stand beside the barn => *barn-stood

B. Discourse Level Deletion
1. Default case
   a. Who has a hat? Me
       *me has a hat

2. Prep deletion
   a. where do you live? San Francisco
       *I live San Francisco
   b. where are you going? Detroit
       *I am going Detroit
   c. when are you playing chess? noon
       *I am playing chess noon

3. Non-deletable:
   a. when did it seem odd to you? *night
      at night
b. how are you playing? *bat
   with a bat

c. How did you get to the other side of the river *tunnel
   *I went to the other side the tunnel
   through the tunnel

d. why was the game cancelled *accident
   because of an accident

e. where does it hurt? *stomach
   in my stomach
   *in stomach

f. where did you put it? *arm
   *on arm
   on my arm

C. Bresnan (1989): Cross-linguistic arguments about unmarked locative
   Klein (1992) Extensive study of L2 Prep-deletion

D. Conclusion: Discourse, Lexical levels => deletability
   Syntactic level => non-deleteable
   Explanation: syntax requires case-assigner
   Lexical: incorporation requires no case
   Discourse: not clear

V. Early Child Relational-Prep Deletion (Brennan (1991))
   A. we colored crayon (=with)
      Shirley get meat dinner (=for)
      I cut it a knife (=with)
      Richard bring snack Shirley (=for)
      I went party (=to)
      feed baby fork (=with)
      Shirley cut fork (=with)
      I sleep big bed (=in)
      Save some later (=for)

   Some children will use argument PP's:

   B. I played with Joan
      Jim was at Cooperstown
      putting Daddy in wagon

   46 prepositions for arguments,
   3 for adjuncts for three children.
   Brennan:
   "3 of 4 children studied, it was true that adjuncts never surfaced with PP's,"

   C. Hypothesis: Verb carries LOC selection, Prep agrees with it

      Relational Prep = Agreement between
D. Representations:

**Head-Complement Selection:**

```
   V
  / \ \
church / \ V
  go  PP
     \ / \
    to church = church-going
```

Kayne (1994) Adjuncts = Specs => Spec-Head Agreement

```
   VP
  / \ \
spec [+loc] V [+loc]
  / \ \
to church go
```

[+loc] is present on the verb itself => Prep-loc = AGR marker, deleteable

E. Disordered Perspective: all AGR of the same type =FF

" how did she decide to sweep the room P
 [+man]i+NPj [+man]i
   / \
  ti NPj

Child assumption: how = verb [man+] P[+man]

VI. Is Concord Agreement? No, a totally different system that may be more available
a. feetses
b. I don't got none

VII Conclusion:

a. Defined notion of "Possible Trigger" in UG
b. Defend AGR as FF
c. Unified theory of Agreement => Relational-Prep = Agreement
d. Predicts: deletion of AGR in IP,DP, and VP for disorder
e. AAE: deletion in DP, IP,VP of number agreement, case retention: case agreement in IP = Nominative

f. Conclusion: (Wyatt) Nominative Agreement is a better marker for disorders in AAE
g. Conclusion: Possibility that AGR as a formal Feature could be missing as a defect of UG
