

Mobius Report Printing Workaround

Description

As of Java 1.7, the print and quick print feature on Mobius no longer functions. As a workaround, users must first open the report as a pdf file and print from Adobe Reader. The instructions below describe this workaround.

Report Printing from Adobe Workaround

1. Click the Download Pages icon (next to the print icons). *Note: They should use the icons over the report not the ones over the treeview.*

2. Change the settings as shown in the popup window and click the Create Pages icon.

3. When prompted by the Adobe dialog box, open (or save) the file. After opening, use Adobe's print function.
