

PDF Sizing Print Issue Solution

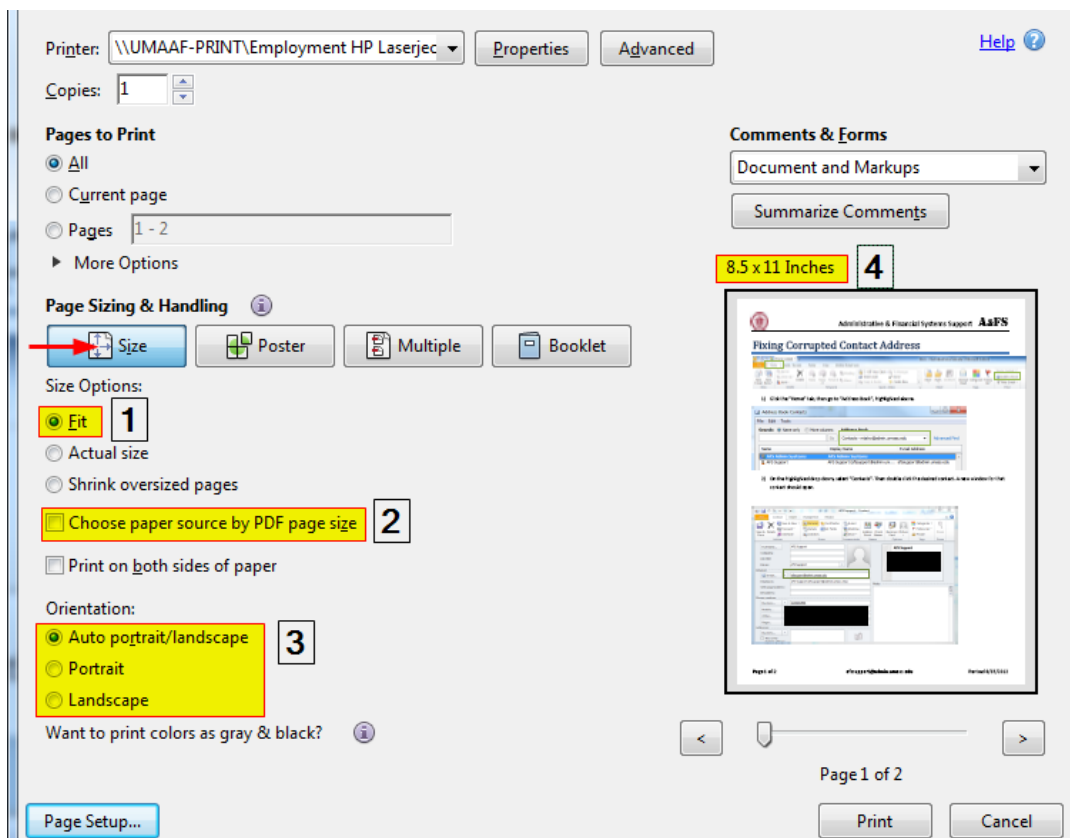

Solution for: Issue with printing causes first page to appear fine, then all subsequent pages are rotated and/or decreased in size.

Reason for issue: Updates may cause print setting to revert to previous or improper states. Changing the settings manual is the only solution at this time.

Solution:

When printing, after going to File > Print, the print window will open. It is advised to always check the print settings before printing.

Make sure under “Page Sizing & Handling” that the “Size” button is selected and that the following settings are correct:

1. Size option is set to Fit. If set to “shrink” some issues may occur.
2. “Choose paper source by PDF page size is turned” should be off for most cases. If needed, select the paper manually from the Properties or Advance buttons near the top of the window.
3. Orientation is set to the desired state. Issues may occur if set to “Auto”. It is recommended to manually select the state of orientation.
4. Double check that the desired paper matches the document size. The text shown is the document size.
