The Massachusetts Department of Public Health (MDPH) is conducting a biomonitoring study in cooperation with the U.S. Centers for Disease Control and Prevention (CDC). The study, called Biomonitoring Massachusetts, will improve the ability of MDPH to prevent negative health effects following exposure to environmental chemicals. MDPH is seeking a summer intern to assist with community engagement, study enrollment, educating participants on biomonitoring procedures, and answering frequently asked questions. The position is located in Boston, MA.

**The ideal candidate:**
- Has an interest in clinical research and/or public health
- Is able to communicate effectively with potential study enrollees and staff members
- Has a pleasant and enthusiastic disposition on the phone and in person
- Has experience with diverse populations, such as the elderly and non-English speakers
- Has some previous customer service experience
- Is comfortable with MS Office products, such as MS Access and MS Excel
- Has experience with data entry and using forms
- Is able to work flexible hours, including evenings and weekends

Interested candidates should contact the Biomonitoring Staff in the MDPH Environmental Toxicology Program at:

Tel: 617-939-8541
Email: dph-biomonitoring@state.ma.us
