

PUBLIC HEALTH....NOW WHAT?

What You Can Do with a Public Health Degree

Research, health promotion, education, management, and policy development are some of the many focal areas for public health professionals. Public health careers offer something for everyone. Epidemiology and biostatistics involve mathematics and modeling. Environmental health includes a wide range of science skills. Health administration incorporates business and management skills. Health education involves skills required to develop community-wide prevention programs. Health policy includes an understanding of the law and law-making process. The variety of public and private sector careers in public health means that there are a wide range of public health career opportunities that could fit your personal goals.

[School of Public Health Jobs MN](#)

It has become difficult to advance in the field of public health without significant experience or a master's level degree. With a bachelor's degree, look for entry-level positions, often working in a support role. Bachelor's graduates may also qualify to work as health education teachers after the additional completion of a state-approved educator program. Organizations in smaller or rural communities, or communities abroad, may be more flexible about hiring public health professionals with undergraduate degrees.

IMPORTANT TRANSFERABLE QUALITIES TO INCLUDE ON YOUR RESUME (WHETHER YOU'RE PURSUING A JOB IN THE VARIETY OF PUBLIC HEALTH FIELDS OR NOT)

Analytical skills. Many public health professionals analyze data and other information to evaluate programs and to determine the needs of the people they serve. Many others must be able to understand and follow current regulations and be able to adapt to new laws.

Instructional skills. There are some fields of public health (such as education) where professionals should be good at teaching and public speaking so that they can lead programs and teach classes.

People skills. Public health professionals interact with many people. They must be good listeners and be culturally sensitive to respond to the needs of the people they serve. Many need to be able to discuss staffing problems and patient information with other professionals, such as physicians and health insurance representatives. They must be able to motivate and lead staff.

Problem-solving skills. Public health professionals need to think creatively about how to improve the health of their audience through health education programs. In addition, they need to solve problems that arise in planning programs as they are often responsible for finding creative solutions to staffing or other administrative problems.

Writing skills. Public health professionals develop written materials to convey health-related information. They also write proposals to develop programs and apply for funding.

Communication skills. Professionals in the public health field must be able to communicate effectively with other health professionals

Detail oriented. Public health professionals such as occupational health and safety specialists must pay attention to details. They need to recognize and adhere to specific safety standards and government regulations. Others must pay attention to detail. They might be required to organize and maintain scheduling and billing information for very large facilities, such as hospitals.

Stop by SPHHS Career Services in Arnold 119 for a walk-in with a Career Ambassador Peer Advisor. They can help you navigate your job search, review your resume, or cover letter. For their hours or to make an appointment with your Career Advisor visit: <http://www.umass.edu/sphhs/> > Careers

Technical skills. Some professionals in the field must be able to use advanced technology. They often work with complex testing equipment. Many must be able to follow advances in health care technology. For example, some may need to use coding and classification software and electronic health record (EHR) systems as their facility adopts these technologies.
