

Master's of Science in SUSTAINABILITY SCIENCE

33 Credits | 2 Semesters + 1 Summer

Program Features

- + One-on-one advising
- + Small class size
- + Career development training
- + Networking
- + Alumni mentoring
- + Interdisciplinary coursework
- + Choose from 5 specializations:
 - Urban Sustainability
 - Renewable Energy & Efficient Design
 - Sustainable Agriculture & Food Systems
 - Water Sustainability & Climate Change
 - Environmental Quality

M.S. in Sustainability Science

Sustainability Science is a one-year professional master's degree program that trains students for sustainability-focused careers in industry, academia, government, and the nonprofit sector. The program is grounded in the philosophy that solving societal challenges requires a new generation of leaders who have an understanding of integrated sustainable thinking, rigorous interdisciplinary academic training and practical career-based experience. As such, it is tailored to meet these challenges and prepare our students to be highly competitive in the market place. The program can be completed in just 12 months if attending full-time. In its 9th year, 86% of Sustainability Science graduates are employed in the sustainability field.

Who is this program designed for?

Sustainability is a broad field that attracts students from a variety of different backgrounds including the life sciences, social sciences, engineering, humanities, arts and policy. The program values the diversity of perspectives. We look for a demonstrated commitment to sustainability and evidence that students possess the academic rigor needed to succeed in graduate school. In addition, we look for people that are motivated to make a difference in the world.
