

Simon Pereira

Practicum Synopsis

During the summer I completed an internship at the Massachusetts Department of Energy Resources with the Leading by Example Division. During this time I completed three presentations for programs related to state construction and electric vehicles.

One research presentation I worked on was about incorporating embodied carbon into state construction. In this presentation I explored existing programs and plans for state level action to incorporate embodied carbon guidance into state construction. That work can be found here:

📎 [Opportunities Embodied Carbon in State Construction.pdf](#) .

In my second presentation I completed research showing different ongoing state low to moderate income electric vehicle rebate incentive programs and suggestions for a Massachusetts' program. That work can be found here: 📎 [LMI Rebates.pdf](#) .

In my final presentation I created a report overviewing the progress of the MOR-EV Trucks program. This presentation shows the different analytical graphics that I created for the program. That work can be found here:
