Data Update for Thompson Island, Boston Harbor, MA June 2005

Prepared for
Massachusetts Technology Collaborative
75 North Drive, Westborough, MA 01581

By Chris Elkinton

Monthly Data Summary for June 2005

This update summarizes the monthly data results for the Thompson Island monitoring site in Boston Harbor, MA, at 42° 18' 56" N, 71° 0' 40" W (NAD 83). More information on the sensors and site can be found at http://www.ceere.org/rerl/rerl_resourcedata.html.

Height	Wind Speed			Prevailing Wind Direction
	Mean [m/s]	Max [m/s]	Turbulence Intensity	
40 m	5.05	12.62	0.16	225, SW
25 m	4.72	12.43	0.18	225, SW

The data can be found at the Renewable Energy Research Laboratory web site:
http://www.ceere.org/rerl/rerl_resourcedata.html.

Data Recovery

All raw wind data are subjected to a series of tests and filters to identify data that are faulty or corrupted. The gross percentage of data recovered (ratio of the number of raw data points received to data points expected) and net data recovered (ratio of raw data points which passed all QA control tests to data points expected) are shown below.

Gross Data Recovered [%]	100.00
Net Data Recovered [%]	98.37

Maintenance Issues and Changes to Site Configuration

The following maintenance/equipment problems occurred during June 2005, and the following corrective action was taken:

- A regularly scheduled site visit occurred on June 20. A wire attached to the battery was found to be loose and the FAA light was not working due to a tripped circuit breaker. These problems were corrected.

Monthly Data Time Series

Seen below is a graph of wind speed at Thompson Island for the month of June 2005, at the highest anemometer height of 40 m.
